

Al-Andalus Software Development & Technology Co. (ASD)

Perfect Post – Paid Collection System

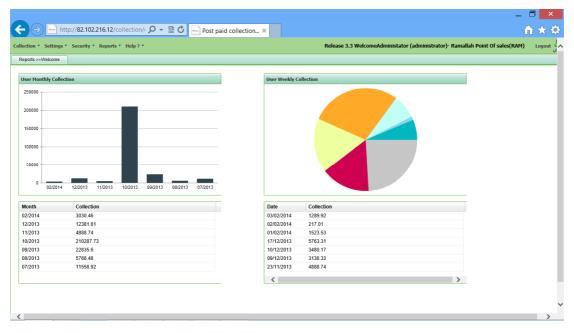

Product Overview 2014

Overview

'This system provides a mechanism to collect postpaid subscribers' payments from the different showrooms and sales points and is dedicated to Telecommunication operators'

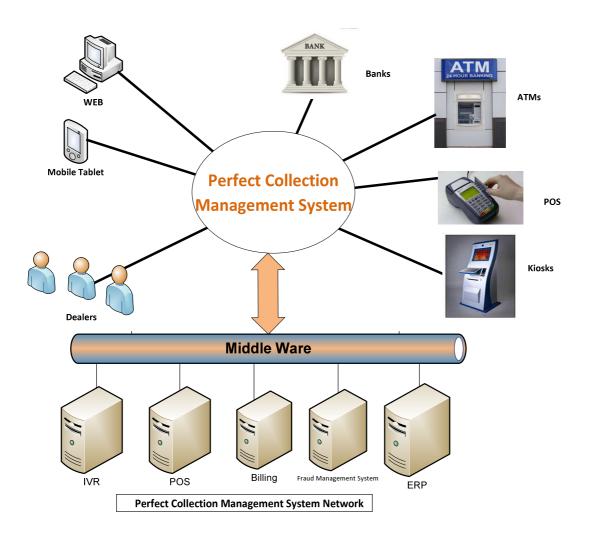

Perfect Postpaid Collection System is a unique and integrated software platform, which allows mobile phone and fixed-lines operators to manage all payments collection operations and functions from their post-paid subscribers. The system facilitates the payment process for the subscriber and enables the operator to offer new payment alternatives and services. In other words, Perfect Collection System is a subscriber-focused system.

This system represents a true breakthrough in payment collection for the telecommunication industry as it implements a model, which is far superior to traditional offline collection methods. Through standardized online interfaces to a variety of payment channels such as banks, dealer and POS

networks, and an internet portal, the system presents unpaid invoice information to the subscriber; validates their authenticity; offers a variety of secure options for payment; receives payment and updates the operator's billing information, all online and in near real-time. It also enables the operator to carry out online monitoring of cash flow, thus reducing operational expenses for both the operator and the collection intermediaries, by automating all the required processes such as end-of-day settlement.

How the System Works?

The Perfect Post-Paid Collection System maintains its own configurable database of unpaid and paid invoices, which is fed by the billing system or the data warehouse system, either online or via batch transfers.

This information is presented through a range of online channels, on an on-demand basis. The database is updated in real-time by payment transactions, and advices are sent to the operator's billing and other systems.

Dealer Network Management

Via on-line connection between the operator and the dealers, it is possible for operator to monitor and manage all transactions in near real-time. This approach to dealer management goes far beyond a conventional partner relationship management system as it provides capabilities that let the operator build a strong and closely linked collaborative relationship with the dealers. By using this system the operator can:

- Manage commissions and incentive payments automatically
- Analyze and support dealer performance
- Segment and authorize the dealer network
- Manage deposit payments
- Perform automatic reconciliation

Financial Reconciliation Module

The system can be integrated with the Point of Sale (PoS) system and any Financial Suite such as Oracle Financial package. The financial reconciliation module gives operators the power to manage all commissions and value dated operations with the banks and the dealers, and streamline back-end operations and offer additional treasury management functionalities.

Using Financial Reconciliation Module, all adjustments, new definitions, reconciliation requests are performed online with immediate results. All transactions are posted to an integrated database, including exceptions, discounts, installments and rejections, and a complete history of every processed item is available and may be retained for extended periods. Full online capability allows immediate corrections and updates to balances.

Supported Payment Channels

- Point of Sale (PoS)
- Banks
- Postal Organizations
- Retailers with Branch Networks
- The Operator's Own Tellers
- ATMs and Portals
- Dealer, POS and Kiosk Networks

Supported Payment Instruments

- Cash
- Credit or Debit Cards
- Bank Transfers and Standing Orders.
- Standing Orders.

Features & Benefits

Below are some of the main features and functionalities of this product:

- Ability to collect bills depending on the customer category
- Accepts multiple currencies for each payment
- Accepts multiple payments types (cash, cheque, credit cards)
- Accepts different types of down payments
- Manages down payments (reassign, distribute on open bills)
- Integrates with Oracle Financial suite or any accounting system
- Integrates with any billing system and Data Warehouse System (DWS)
- Manages the collectors' commission
- Manages the discount operations with flexible hierarchy of approvals
- Manages high usage of user behavior
- Integrates with IVR systems
- Accepts payments via bank with ability to integrate directly with the banking system
- Can define commission schema flexibly

- Ability to prevent fraud cases
- Ability to integrate with point of sales system
- Reactivates disconnected accounts
- Flexible user permissions
- Robust technology and framework
- Independent platform
- Gives general and specific statistics, and charts
- Flexible reporting
- Cheque management

Key benefits

- Multiple Payment Channels
- Increases air-time and revenue
- Decreases risks and operational costs
- Increases customer satisfaction and loyalty
- Improves Dealer Network Management
- Less processing time
- Secure and convenient solution
- Retain market leadership through innovation

Operator / Distributor Benefits

- Reduces investment cost of infrastructure and other associated costs
- Increases end user satisfaction
- Billing loyalty by offering better end user service
- Innovative and unique solution
- Increases the number of outlets and therefore End users can access nearest outlet to pay their bills
- Faster processing and shorter waiting times (no queues)

End user Benefits

- Flexible and easy payment method
- Allows multiple payments
- Online acknowledgement from operator to End user for payment
- Saving time and transportation cost for End user

Collection SMS

As part of the notification component of the Collection system, any transactions (Payment etc) can be configured to send an SMS to the subscriber upon paying whole or part of the invoice (s). This includes not only payments in the showrooms only but also to bank transfers and other payment methods or types. This can be configured and setup by the collection admin user. For example, the SMS can be configured to send an SMS to subscribers once a bank file is received and uploaded to the collection system. Other payment channels are also configurable to send SMS. The Collection system allows for the configuration of the message content in order to make it possible to change it at any time. The SMS received also provides remaining balance for the subscriber as the following example:

عزيزي المشترك، شكراً لتسديدك مبلغ 113.02 دولار من خلال حسابك البنكي من فاتورة 2014/05 مع العلم أن مجموع فواتيرك غير المسددة حتى اللحظة هو 21.40 دولار

The SMS module interfaces with any web service or API to send the SMS message.
